

A Seed-level sealed-test macro AUPR

B Rank-one counts across final seeds

C Descriptive interpretation boundary

1

Top-three mean macro AUPR difference < 0.004

2

Seed-level rank-one counts are split among top models

3

Ranking is descriptive; no inferential superiority claim

No post-test model reselection.

One-time sealed-test seed dispersion; rankings are descriptive and were not used for post-test model reselection.
